ENCORE

COATING PLATES

 **ENCORE**

ENCORE is a coating plate from Wikoff Graphics produced using photopolymer specifically designed for offset printing and spot coating applications. The plate is processed without the use of harmful solvents and in a low temperature environment, giving it the most accurate plate to plate registration available on the market.

Gauge
Designed for use on the blanket cylinder, **ENCORE** plates are available in both 0.045" or 0.067" gauges.

Edge Bars
These plates may also have lead and tail edge bars added when needed per press specifications.

Plate Life
Encore delivers long plate life on press due to its extreme durability, increasing productivity and reducing material costs.

Transfer
Superior coating transfer, resulting in a homogeneous spot coating guaranteed to meet today's demands for the utmost in quality.

Compatibility
Compatible with commonly used solvent, water and UV-based systems on all substrates.

Registration
Perfect for tight registration, with major improvements over conventional coating blankets.

CleanPrint™ Technology
In addition to the tight registration capabilities of **ENCORE**, the photopolymer itself contains a unique technology called **CleanPrint™**. **CleanPrint™** is a flexographic plate technology engineered to maintain a low dyne level. It features low plate surface energy that transfers all remaining inks and coatings to the printed substrate. Compared to conventional plates, this reduces press-cleaning stops, creating a significant profitability improvement. **ENCORE** plates deliver very high resolution with clean reverses and exceptional solids providing more design flexibility and enhanced graphic quality.
